

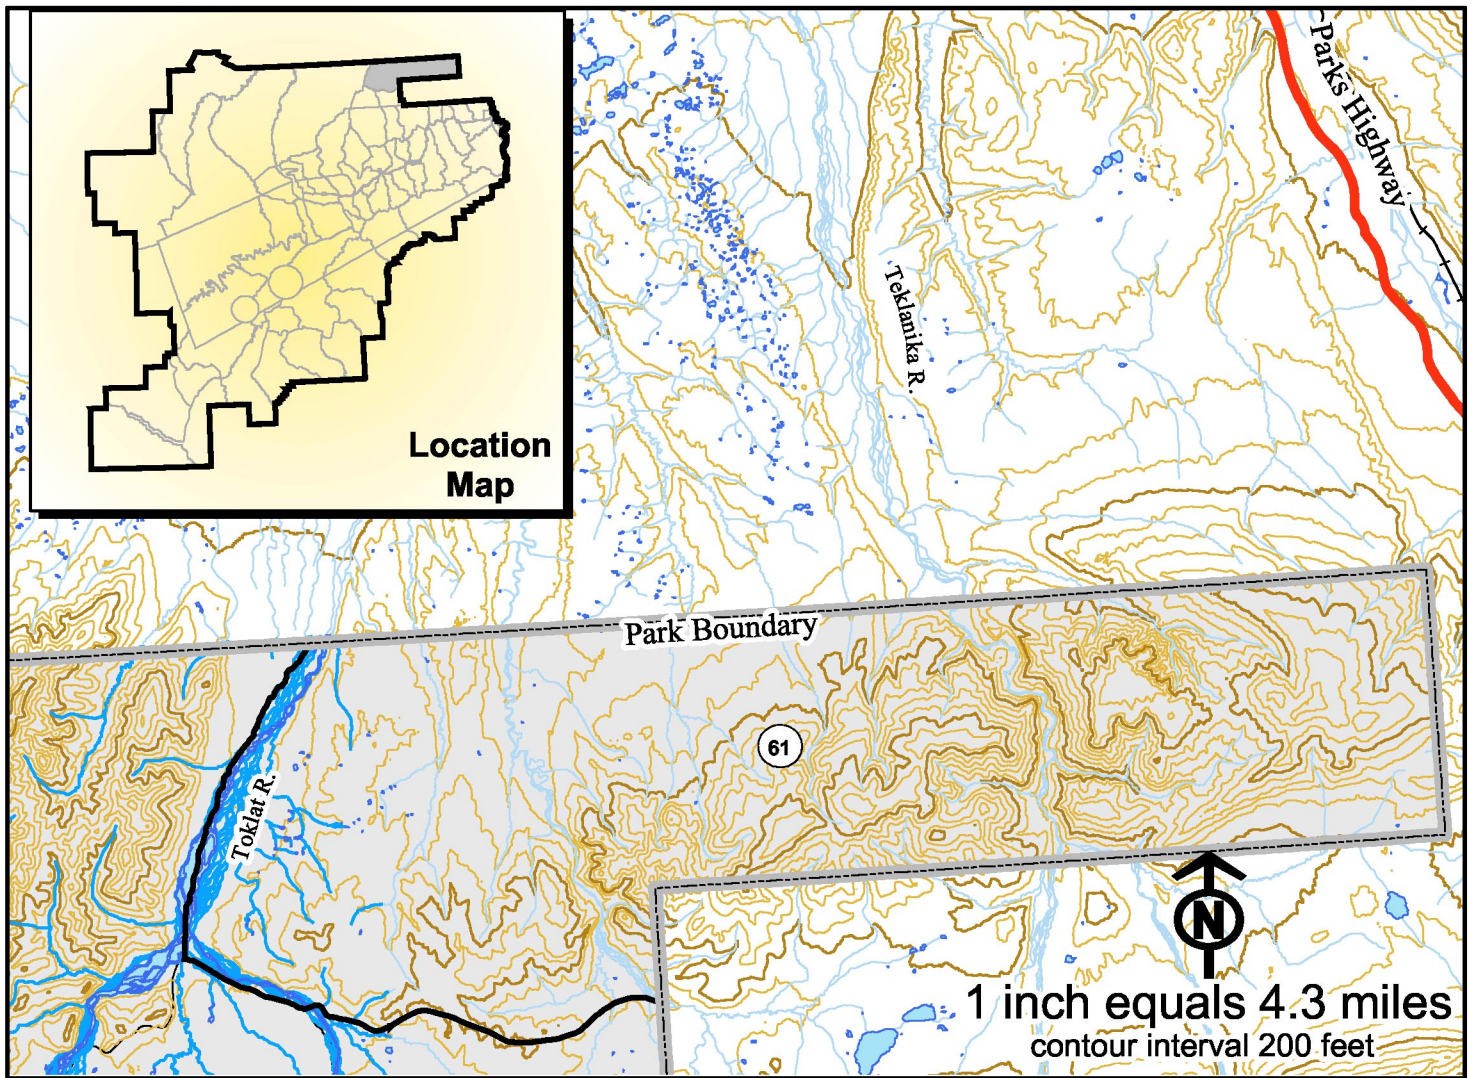

Map 2-37 - Stampede (Unit 61)

Stampede (Unit 61)

Low shrub birch and willow communities, sedges, and a smattering of alder, willow, and spruce. Valuable wildlife habitat, refuge area, and travel corridor for species moving into and out of the old park. Raptor sites throughout unit. Wolf dens. Scattered archeological sites. Stampede, from airstrip past mess hall, is eligible for NRHP. Rare plants. Winter trail along Stampede corridor.

Receives little human use. Good opportunities for solitude and a variety of recreational activities. Wilderness character is good in summer except for the easternmost end which may be affected by air traffic along the highway corridor. In winter, occasional noise from snowmachines degrades character.
